(15) PDF

Web browser is simply a terminal emulator designed to display text on a screen The two essential differences between an ordinary terminal emulator and a Web browser are that the browser knows how to deal with(1) and that it has a mechanism for(2) graphical files Display text display graphics and (3) hyperlinks--there's 99 percent of me(4) value

That's not to say that the manufacturers didn't go all Out to attach a hyperactive efflorescence of useless capabilities onto their browsers Remember when media channels in the browser were a big deal instead of the clutter you cant wait to 0delete from your favorites of bookmarks menu? Remember when clientside Java applets were supposed to become the preferred(5) for application development? Remember frames and all their nasty side effects? (1)A superlinks B hyperlinks C 1inks D connections (2)A illustrating B drawing C writing D displaying (3)A direct B indicate C goon D navigate (4)A Web browser's B terminal's C emulator's D networks (5)A platform B plane C plant D plate (1)B (2)D (3)D (4)A (5)A : #0000ff>
