\_\_\_\_\_ tested regularly for the sake of safety and efficiency. A. must be B. will be C. be D. are 答案 : C

10. Wood does not conduct electricity, \_\_\_\_\_ A. so doesn ' t rubber B. nor does rubber C. neither doesn ' t rubber D. nor rubber does 答案 : B

Part Two  
Reading Comprehension  
Directions: In this part there are 4 passages followed by questions or unfinished statements, each with four suggested answers. Choose the one you think is the best answer.

Mark your choice on the Answer Sheet by drawing with a pencil a short bar across the corresponding letter in the brackets.

Questions 11-15 are based on the following passage:

Passage 1  
If you are like most people, your intelligence varies from season to season. You are probably a lot sharper in the spring than you are at any other time of the year. A noted scientist, Ellsworth Huntington (1876-1937), concluded from other men ' s work and his own among peoples in different climates that climate and temperature have a definite effect on our mental abilities. He found that cool weather is much more favorable for creative thinking than is summer heat. This does not mean that all people are less intelligent in the summer than they are during the rest of the year. It does mean, however, that the mental abilities of large numbers of people tend to be lowest in the summer. Spring appears to be the best period of the year for thinking. One reason may be that in the spring man ' s mental abilities are affected by the same factors that bring about great changes in all nature. Fall is the next-best season, then winter. As for summer, it seems to be a good time to take a long vacation from thinking!

11. Huntington based his conclusions on \_\_\_\_\_. A. records of

change in his own intelligence  
B. work with peoples in different climates  
C. records of temperature changes  
D. all of the above

答案 : B
