　　Topic: 84 The Internet Provides people with a lot of information,
but is this information valuable, or so much information create
problems for us? In my point of view, every thing has its two sides,
and the value of the Internet far outweighs the disadvantages it brings
to us. The Internet has been beneficial to people around the globe.
My view is a commonsense one, based on the fact that the Web is a
vast storehouse of information and opinion, which can be scientific,
literary, political, sporting or sexual. Anyone with access to a
computer and a dialup connection can unlock the door and trawl
through its offerings. The Internet can be used as a broad base of
knowledge that contributes to the educational system. Students and
teachers benefit from the use of the Internet, as well as administrators
and others outside of formal education. Students benefit because the
Internet provides a resource to supplemental information for any
subject. Educators benefit because the Internet provides a vast
knowledge base to prepare for topics. People are not only learning
from the Internet, they are contributing and sharing knowledge
through networked communities. The Internet is the advancement
of education for all its users. Internet can deliver better customer
services to people. The Internet is changing the way we do business.
Using Internet broadcasting, we are able to target the right audience,
prepare and present a technical presentation on a popular topic,

interact with new customers, and collect hundreds of highly qualified leads. As Internet companies continue to find innovative ways to leverage the capabilities of the Internet for businesses, the more we will learn how to provide optimal solutions for customers. Which in turn, will greatly benefit people. The Internet today is a way to transfer and share information. On the whole, it is a benefit to individuals of all kinds. We do have problems surrounding the Internet that need to be solved, but as with all new technologies there are debates and opinions. Since the Internet technology is spreading, it will soon become as popular as all other forms of communication. If you have not tried it, do so.   What things can be widely used in education, business, government, family and almost all the other fields all over the world? One answer is the Internet, which is a great communication tool in the 21st century. Some people claim that the 21st century could not exist without the Internet. Therefore, children and young adults should use the Internet freely everywhere. Personally, I have the impression that there are some flaws in this seemingly indisputable proposition. Children and young adults should not use the Internet freely for three reasons, and some safe programs and filters are indeed needed in the Internet. For one thing, the children and young adults that use the Internet freely might get the wrong information by chance. Children and young adults can be influenced easily by many new things. The Internet is so wide that it includes some wrong information such as violence and pornography. That information can cause many bad effects on the children and young adults, which

are bad for them are growing. For example, there is some violence information in the Internet. After the children and young adults watch that by chance, they might follow the violence way from the Internet to solve the problems. Consequently, we have to use some kinds of software to block this kind of information. This highly technical software has already been developed well. Parents can just trust this kind of software in order to prevent children from accessing the blocked websites, which includes the wrong information. For another thing, the children and young adults using the Internet freely might cause some computer problems. As the Internet is used on the computers, it is related to the computers closely. The computer is a highly technical machine that sometimes is hard to control. As a result, some bad things may have loopholes to get into the computer such as the computer viruses. If the children and young adults use the Internet freely without some safe programs their computers will 100Test
