Topic159：20世纪你认为最大的变化是什么？

Topic159 The twentieth century saw great change. In your opinion, what is one change that should be remembered about the twentieth century? Use specific reasons and details to explain your choice. [参考提纲] 159 信息技术的变化 (1) 提高了效率 (2) 增加了交流 (3) 节省了成本 [托福参看范文] Topic: 159 Which invention was the greatest invention of the 20th century has been discussed many times. Different people have different views. Some think the greatest invention was television, some think it should be cars. But as far as I am concerned, the greatest invention of the 20th century would be computers. The reasons for my opinion are as follows. First of all, computers save a great deal of effort people spend on calculating. Before computers were invented, people had to calculate manually. Sometimes it took scientists weeks, even months to have a result. Of course, they might made mistakes during their calculation. That affected the accuracy of data. But with the help of computers, people are freed from heavy calculation. It only takes seconds to have a result which used to take weeks in the past. Second, computers can simulate different environments that can't be created in real life. In the science research, sometimes scientist need to have a simulation environment to improve their theories or as a basis of further research. Without computers it's difficult to have

accurate and reliable results. But computers can make everything easy. Just input programs and data everything will be done. The reason I think is becoming more and more important nowadays. That is computer is the way of access to the Internet. The Internet was developed based on the local area network(LAN) of computers. Today, the Internet has become the fastest developing medium in the world. You can find almost everything you need on the Internet, communicate with friends, read news, watch movies, listen to music etc. But you must do all the above things on a computer. Can ' t log in the Internet means behind times today. Although many other inventions of the 20th century brought great convenience to human or changed people ' s lives, computers have the most valuable contribution to human, and it will have much more contribution in the future.

Topic: 159 Many inventions have greatly changed the life of people. For example, when the electricity was invented, people can use light, so that they would not be afraid of night. When the car was born, people can not have to go everywhere on foot. When the television entered into the history , people can better know the world. But , what is one change that should be remembered about in the 20th century, the popularity of computer is undoubtedly the answer. We can look into every good aspect of the computer, but I want to explore the most important role the computer plays is that it greatly increases the efficiency of working. If you want to type a paper, you do not need to worry about the errors, the word process will examine for you automatically. Also you should not be worried about losing the paper, you can save it in the computer. In fact, that is

just a piece of a cake for a computer, it can not represent the function of a computer. When you enter into the international network, the computer will lead you into another world. In this way, you just stay at home, but you can know everything happening in the world in every corner. Isn't it wonderful? Nowadays, many people choose to work at home to do work, as they can connect the offices by a computer. They say it greatly saves much time. Second, the computer makes the communication much more convenient. In the past, we got the news by posting letters, in this way, it at least needed three days. However, if you send an electronic mail by a computer, you get the news only three seconds. Not only saving the time, but it can intensify the emotion if you and your friends communicate more. Third, computers also bring us much enjoyment. There are many games in the computer, for different kinds of people. So people find another way of relaxing themselves except watching TV, seeing films. In fact, the computer games are not just only games, you can learn more from them, and they can also make you alert. As the advantages I explore above, I think the computer should be remembered about in the 20th century. Topic: 159 There have been many changes, both technological and cultural, in the twentieth century. I believe that one stands out above the rest: advances in medical science. The changes in medical science go together with the changes in technological and cultural areas. One can move ahead only with the help of the others. We can see the results of medical advances in three areas: development of vaccines and antibiotics, expanded access to health care, and improved surgical

techniques. When medical researchers learned how to prevent disease and stop it from spreading, the quality of life for many people around the world improved. Today smallpox is a forgotten disease and vaccinations are no longer required. Polio is under control and the vaccine is widely available. The development of penicillin has helped many people recover from serious illnesses. Although health care is not universal even in developed countries, it is much better than it used to be. Local clinics, visiting nurses, and specialty hospitals have all improved the health care for our communities. If you should be unfortunate and require surgery, you are still lucky to have the surgery today rather than even ten years ago. Now with microscopic and laser surgery, operations are more efficient. You spend less time in the hospital and you recover faster. I can't think of any other change that has affected the lives of so many people. Our health is important to all of us. We all are thankful for advances in the area of medical science. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
