作文练习：能源短缺问题 [ 参考范文 ] Energy Shortage Energy

shortage is a very serious problem in the world. Many people worry that energy resources on the earth will be exhausted if we use them in an unchecked way. This, most people agree, will cause serious problems and even crisis and jeopardize the survival of mankind .

On the one hand, most people agree that the problem can be solved in one way or another. One is to conserve and save our energy. For example, some countries have a daylight saving system to use less electricity for lighting. Some have enforced serious penalties on overuse of electricity, water, and farming land. By these means, people hope the drain on energy resources could be slowed down.

However, conservation alone cannot solve the problem. Another way, is to develop new energy resources. There are many other energy resources that we can develop such as nuclear power, waterpower and solar power. If the above two guidelines are strictly followed, I believe, we can solve the problem of energy shortage in the end. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 [www.100test.com](http://www.100test.com)
