Because scientific knowledge is increasingly important in our technological world and in the practical world of jobs and careers, schools should devote sufficient time to teaching mathematics and science. This is not to say, however, that schools should devote less time to the arts or humanities. To the contrary, in a technological age the study of arts and humanities is probably more important than ever for three reasons. First of all, studying the arts and humanities can help students become better mathematicians and scientists. For example, recent studies of cognitive development show that studying music at an early age can strengthen a child's later grasp of mathematics. And understanding philosophical concepts has helped scientists recognize their own presuppositions, and frame their central questions more accurately. Secondly, studying the creative and intellectual achievement of others helps inspire our own creativity and intellectual questioning. This is particularly important in an era dominated by technology, where we run a serious risk of becoming automatons who fit neatly into the efficient functioning of some system. Finally, technology is valuable as an efficient means to our important goals. But neither technology, nor the science on which it is founded, decides which goals are best, or judges the moral value of the means we choose for their attainment. We need the liberal arts to help us select worthwhile ends and ethical means. In conclusion,

schools should not devote less time to the arts and humanities. These areas of study augment and enhance learning in mathematics and science, as well as helping to preserve the richness of our entire human legacy while inspiring us to further it. Moreover, disciplines within the humanities provide methods and contexts for evaluating the morality of our technology and for determining its proper direction. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
