Derivatives are available based on the performance of stocks, interest rates, currency exchange rates, as well as commodities contracts and various indexes.

Derivatives give the buyer greater leverage for a lower cost than purchasing the actual underlying instrument to achieve the same position. For this reason, when used properly, they can serve to “ hedge ” a portfolio of securities against losses. However, because derivatives have a date of expiration, the level of risk is greatly increased in relation to their term. One of the simplest forms of a derivative is a stock option.
