COMPREHENSION In this part here are four passages followed by questions or unfinished statements, each with four suggested answers marked A, B, C and D. Choose the one that you think is the correct answer., Mark your choice on your answer sheet. TEXT A In the town of Peppard, a computer helps firemen. The computer contains information about every one of the 15 000 street addresses in the town. When firemen answer a call, the computer files them important information about the burning building. The computer can give the location of the building and its size, type, and contents. In fact, the computer system has many different ways of helping fire fighters with their problems. For example, it can give medical information about sick people living in a burning building. With this information, the firemen can take special care to find these sick persons and remove them quickly and safely from the burning building. The speed at which the computer works is amazing. Within two or three seconds after a call is received, the computer provides necessary information for the fireman. The information is then sent to them by radio from the computer center in Town Hall. The computer system also contains a medical record of each of the town's 110 firemen. This kind of information is especially useful when a fire fighter is injured. With this medical information, doctors at the hospital can treat the injured fireman more quickly and easily. The

firemen themselves are grateful for the computers help. The computer tells them about possible dangers ahead of them and helps them prepare for these dangers. Many times the computer information helps to save lives and property. Sometimes the lives are those of firemen themselves.

66. The computer helps fireman in the following ways EXCEPT \_\_\_\_\_

- A) locating the building on fire.
- B) giving information on address.
- C) locating firemans problems.
- D) providing medical care.
