https://www.100test.com/kao_ti2020/139/2021_2022_70-059TCP___c100_139500.htm Prep Material: MOC Transcender Prep Exams for TCP/IP v4.0 My exam was similar to the Suresh s exam: 1) How a third DNS Server to function as a Backup server in an environment where there are already two DNS Servers acting as Primary and Secondary? CACHING-ONLY SERVER 2) How can you configure the third DNS Sever which is to be configured for supporting the load balancing of Primary Server and should not participate in Zone Trasfer Traffics? CACHING-ONLY SERVER 3) What is the utility to view who are all currently having TCP/IP connection with your Workstation? NETSTAT 4) What is the utility to view what configuration changes the DHCP made at your workstation Configuration? IPCONFIG /ALL 5) What is the utility to purge the contents of the arp cache? ARP -d 6) What is the utility to monitor the Ethernet traffic and the TCP/IP statistics? NETSTAT -e -s 7) Which utility will you use to export the statstics collected to a spread sheat for future analsis? PERFORMANCE MONITOR 8) What utility will you use to construct a capacity planning on all statistical datas you collected? PERFORMANCE MONITOR 9) Three UNIX machines are to be stored in the WINS Database manually and what entry will you put at the WINS configuration panel? STATIC UNIQUE ENTRY 10) Why unnecessarily a machine is doing arp broadcast even when the target machine is in the same subnet while other machines in the same subnet are not? B-NODE or INVALID

SUBNET MASK 11) What utility for seeing the IP address-to-MAC- address resolution? ARP 12) You have three subnets in which a single subnet is populated with 10 Laptop workstations and the other two subnets with NT Workstations. You want the 1st subnet to be supplied with IP addresses (of course by DHCP) with a lease acquisition period of 10 days. The other two subnets with 30 & 40 days lease period respectively. How will you configure? BY IMPLEMENTING ONE DHCP SCOPE FOR EACH SUBNET AND SPECIFYING THE LEASE PERIOD AS PART OF EACH SCOPE S CONFIGURATION. 13) Your NT Server in your office is connected via RAS connectivity to the Internet ISP Server through the ISDN communication. Now you want the Windows 95 workstation users in your internal subnet to get connected to the ISP. How will you do that? PPTP 14) You want the Unix member workstations to print jobs at the NT print server connected print device. How will you configure? INSTALL TCP/IP PRINTING SERVICE AND SHARE THE PRINTER. 15) You want the Windows based machines to print at a UNIX-Network printing device connected to a NT Print Server. How will you redirect the jobs to the net printer? LPR How will you configure the printer on the server, if the server will manager the printer? INSTALL TCP/IP PRINTING SERVICE, CONFIGURE A LPR PORT FOR THE PRINTER AND SHARE THE PRINTER. At the client only connect to the printer. 16) You want to send the print jobs to a UNIX workstation from the windows based machines. Which utility will you use? LPR 100Test 下载频道开通，各类考试题目直接下载
