E6_c102_142623.htm q. 1 : physical disk resources in an oracle
database are 1. control files 2. redo log files 3. data files 4. all of the
above 4 q. 2 : what is a schema 1. a physical organization of objects in
the database 2. a logical organization of objects in the database 3. a
scheme of indexing 4. none of the above 2 q. 3 : an oracle instance is
1. oracle memory structures 2. oracle i/o structures 3. oracle
background processes 4. all of the above 4 q. 4 : the sga consists of
the following items 1. buffer cache 2. shared pool 3. redo log buffer 4.
all of the above 4 q. 5 : the area that stores the blocks recently used by
sql statements is 1. shared pool 2. buffer cache 3. pga 4. uga 2 q. 6 :
which of the following is not a background server process in an
oracle 1. db writer 2. db reader 3. log writer 4. smon 2 q. 7 : which of
the following is a valid background server processes in oracle 1.
archiver 2. lgwr (log writer) 3. dbwr (dbwriter) 4. all of the above 4
q. 8 : the process that writes the modified blocks to the data files is 1.
dbwr 2. lgwr 3. pmon 4. smon 1 : oracle does not modify the data in
data file. once the server process makes a change in the memory,
dbwr writes the modified blocks back to disk. q. 9 : the process that
records information about the changes made by all 1. dbwr 2. smon
3. ckpt 4. none of the above 4 : lgwr process records the information
about changes to database q. 10 : oracle does not consider a
transaction committed until 1. the data is written back to the disk by
dbwr 2. the lgwr successfully writes the changes to redo 3. pmon

process commits the process changes 4. smon process writes the data

q. 11 : the process that performs internal operations like tablespace
