描述RTRIM(, ) takes two arguments, where c1 and c2 are characterstrings. This function returns c1 without any trailing characters that appear in c2. If no c2 characters are trailing characters in c1, then c1 is returned unchanged. c2 defaults to a single space.大家对Rtrim舍去字符串右边的空字符串是毫无疑问的有疑问的应该是右边是字符串如何处理的。如：SELECT

```
RTRIM(Mississippi,ip) test1,RTRIM(Rpadded ) test2
```

```
,RTRIM(Mississippi,sip) test3 FROM dual.结果为：test1 test3
```

test3Mississ Rpadded Mtest1的实现首先从字符串Mississippi右边查找ip中的任意字符，此例为i,p,直到Mississippi右边不为i和p字符为止，所以结果应该是Mississtest2的实现去掉字符串的空格test3的实现实现方法同test1首先从字符串Mississippi右边查找sip中的任意字符，此例为s,i,p,直到Mississippi右边不为s、i和p字符为止，所以结果应该是M可以通过下例进一步了解Rtrim函数SELECT RTRIM(Mississippi,Misp)

```
test1,RTRIM(Mississippi,i) test2 FROM dual.test1 test2Mississipp
```
