

当Spring遇到了Oracle，该怎么办 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/142/2021_2022__E5_BD_93Spring_E9_c102_142936.htm 这次项目，我可以被oracle气伤了

。oracle 9i怎么会有那么多问题，驱动怎么会有那么多问题。好了，说问题吧。这次的问题集中读写oracle的blob、clob字段上。1，读写blob需要一个lobhandler，虽然defaultlobhandler可以用于大多数数据库和大多数oracle的版本，却不能用过oracle 9i。我需要一个oraclelobhandler。以下是spring中的配置。

```
/** * 更新指定的blob * @param key * @param contentStream * @param contentLength */public void  
0updateBlog(final String key, final InputStream contentStream, final  
int contentLength) {logger.debug("0update content").try  
{getJdbcTemplate().execute("0update table set content = ? where id  
= ?", new
```

```
AbstractLobCreatingPreparedStatementCallback(this.lobHandler)  
{protected void setValues(PreparedStatement ps, LobCreator  
lobCreator) throws SQLException
```

```
{lobCreator.setBlobAsBinaryStream(ps, 1, contentStream,  
contentLength).ps.setString(2, key).}}).} catch (RuntimeException  
re) { logger.warn("0update content fail"). throw re. } } /** * 取得指
```

```
定的blob * @param name * @param contentStream * @throws  
DataAccessException */ public void getBlobContent(final String id,  
final OutputStream contentStream) throws DataAccessException  
{getJdbcTemplate().query("SELECT content FROM table WHERE  
id=?", new String[] {id}, new
```

```
AbstractLobStreamingResultSetExtractor() {protected void  
handleNoRowFound() throws LobRetrievalFailureException {throw  
new IncorrectResultSizeDataAccessException("Image with id " id "  
not found in database", 1, 0).}public void streamData(ResultSet rs)  
throws SQLException, IOException {InputStream is =  
lobHandler.getBlobAsBinaryStream(rs, 1).if (is != null)  
{FileCopyUtils.copy(is, contentStream).}}}. } 100Test 下载频道开
