<http://www.gzu521.com>] 答案是不能. oracle在文档中这样描述dbv工具: dbverify is an external command-line utility that performs a physical data structure integrity check. it can be used on offline or online databases, as well on backup files.

dbverify checks are limited to cache-managed blocks (that is, data blocks). because dbverify is only for use with datafiles, it will not work against control files or redo logs. 再次注意到读文档是有好处的, 以前并不知道dbv可以直接用来针对数据段进行检查, 引用一个文档中的例子: 这是命令格式: dbv

userid=username/password segment\_id=tsn.segfile.segblock 假定hr用户具有sysdba权限, 执行: dbv userid=hr/hr segment\_id=1.2.67

输出如下: dbverify - verification starting : segment\_id = 1.2.67

dbverify - verification complete total pages examined : 8 total pages processed (data) : 0 total pages failing (data) : 0 total pages processed (index): 1 total pages failing (index): 0 total pages processed (other): 2 total pages processed (seg) : 1 total pages failing (seg) : 0 total pages empty : 4 total pages marked corrupt : 0 total pages influx : 0 highest block scn : 7358 (0.7358) 100Test 下载频道开通，各类考试题目直接下载。详细请访问 [www.100test.com](http://www.100test.com)
