

如何实现servlet中的发信功能？PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/144/2021_2022__E5_A6_82_E4_BD_95_E5_AE_9E_E7_c104_144506.htm javaduke 原创于

www.dukejava.com 主页上附带演示！MailService.java//源代码

如下：（在www.mycgiserver.com调试成功）package

```
javaduke.servlet.import javax.servlet.*.import
```

```
javax.servlet.http.*.import java.io.*.import java.util.*.import
```

```
javax.mail.*.import javax.mail.internet.*.public class MailService
```

```
extends HttpServlet {int index=0.String err=null.//Initialize global
```

```
variablespublic void init(ServletConfig config) throws
```

```
ServletException {super.init(config).}//Service the requestpublic
```

```
void service(HttpServletRequest request, HttpServletResponse
```

```
response) throws ServletException, IOException {String
```

```
mailto=null.String messageText="\n以下为表单内
```

```
容".mailto=request.getParameter("Email").Enumeration keys.String
```

```
key,value.keys=request.getParameterNames
```

```
()while(keys.hasMoreElements()){key=(String)keys.nextElement
```

```
()value=request.getParameter(key).messageText="\n" key ":"
```

```
value.}messageText="\n转发邮件处理程序来
```

```
自\nwww.dukejava.com".Properties pros=new
```

```
Properties().pros.put("mail.smtp.host","mycgiserver.com").Session
```

```
session=Session.getDefaultInstance(pros,null).try{Message
```

```
message=new
```

```
MimeMessage(session).message.setSubject("DUKEJAVA.COM欢
```

```
迎您光临").message.setFrom(new InternetAddress("发
```

信@dukejava.com")).InternetAddress address=new
InternetAddress(mailto).message.setRecipient(Message.RecipientTy
pe.TO,address).message.setText(messageText). 100Test 下载频道
