

我的struts分页算法的实现 (3) PDF转换可能丢失图片或格式 , 建议阅读原文

https://www.100test.com/kao_ti2020/144/2021_2022__E6_88_91_E7_9A_84stru_c104_144699.htm 二 , 根据总的页数 , 当前页这样的话构造函数应该写成:

```
public PageBean(int totalRows,int
currentPage) { this.totalRows = totalRows. this.currentPage =
currentPage. if(currentPage hasPreviousPage = false. else
hasPreviousPage = true. if ((totalRows % pageRecorders) == 0) {
totalPages = totalRows / pageRecorders. } else { totalPages =
totalRows / pageRecorders 1. } if (currentPage hasNextPage = true.
nextPage = currentPage 1. pageStartRow = (currentPage -
1)*pageRecorders. this.pageEndRow = pageStartRow
pageRecorders. } else if(currentPage == totalPages){ pageStartRow =
(currentPage - 1)*pageRecorders. this.pageEndRow = totalRows.
hasNextPage = false. nextPage = currentPage. } if(currentPage
previousPage = currentPage. hasPreviousPage = false. }else
if(currentPage > 1){ previousPage = currentPage-1. hasPreviousPage
= true. } } 100Test 下载频道开通 , 各类考试题目直接下载。详细请访问 www.100test.com
