Given the following code:

```
public void fun () {int i; try {i=System.in.read  
( ).System.out.println(Location 1).} catch (IOException e)  
{System.out.println(Location 2).} finally  
{System.out.println(Location 3).} System.out.println(Location 4).}
```

If an IOException occurs, what will be printed?
A. Location 1
B. Location 2
C. Location 3
D. Location 4

Explanation: When an IOException occurs the Location 1 is skipped. First the exception is caught and the Location 2 is printed. Then the Location 3 in the block of finally is printed. Finally, the Location 4 is printed. Correct Answer: B,C,D

41 of 60 Question: 42 If the method func() is allowed to throw out the IOException, which declaration of this method can

be used?
A. public int func(int i)
B. public int func(int i) throw IOException
C. public int func(int i) throw Exception
D. public int func(int i) throws IOException
E. public int func(int i) throws Exception

Explanation: The throws keyword should be used when declaration of a method. In the declaration IOException and its superclass Exception can be used. Correct Answer: D,E
