company that produces Glabrous Shampoo argues against removing the ingredient HR2 from the shampoo even though a scientific study claims that prolonged use of HR2 can contribute to hair loss. Three reasons are cited as the basis for this decision. First, it is argued that since the scientific study involved only 500 subjects, it can be disregarded. Second, none of Glabrous customers have complained of problems during the past year. And, finally, Glabrous competitors use more HR2 per bottle than Glabrous. The president's decision is problematic in several respects. To begin with, the fact that the scientific study on HR2 involved only 500 subjects is insufficient grounds to dismiss the results of that study. If the subjects for the study were randomly chosen and represent a diverse cross section of the population of shampoo users, the results will be reliable regardless of the number of participants. Next, the scientific study determined that prolonged use could contribute to hair loss. While "prolonged use" was not defined in the memorandum, the fact that none of Glabrous customers have complained of problems during the past year is not a reliable reason to believe that problems will not arise in the future. Finally, the fact that Glabrous competitors use more HR2 in their products than Glabrous uses is irrelevant to the question of whether Glabrous should remove HR2 from its product. Moreover, rather than providing a reason for not removing the

compound, this fact serves better as a reason for doing so. By removing HR2 from its product Glabrous could gain an edge over its competitors. In conclusion, the reasoning in this argument is not convincing. To strengthen the argument the author would have to show that the study was biased or was based on too small a sample to yield reliable results. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
