```
Getfiles_good.php
require_once("DB.php");
function get_files($name) {
    $rows = array();
    $dsn = "mysql://root:password@localhost/good_multi";
    $db = DB::Connect($dsn);
    if (PEAR::isError($db)) {
        die($db->getMessage());
    }
    $res = $db->query("SELECT files FROM users WHERE login=?", array($name));
    $files = null;
    while ($res->fetchInto($row)) {
        $files = $row[0];
    }
    $rows = array();
    foreach (split(",",$files) as $file) {
        $res = $db->query("SELECT * FROM files WHERE id=?", array($file));
        while ($res->fetchInto($row)) {
            $rows[] = $row;
        }
    }
    return $rows;
}
$files = get_files("jack");
var_dump($files);
?>
```

该技术很慢，难以维护，且没有很好地利用数据库。惟一的解决方案是重新架构模式，以将其转换回到传统的关系形式，如下所示。100Test 下载频道开通，各类考试题目直接下载。详细请访问 [www.100test.com](http://www.100test.com)
