是VERSION68-79。 计算机Globally, we have moved from a culture centered on network television, cable, AM and FM radio and telephone into a digital society with mass media, streaming information, intelligent computer. To shift to a digital economy, best demonstrated by the explosive growth of the Internet, is transforming everyday products and practices. Ideas expressed in soft wares, chips, communication systems, financial institutions and mass media have enormous leverage worldwide. Beyond emails and online shopping, the Internet promises to change dramatically huge spectrum activities. Its benefits can be well illustrated in the following aspects. In the first place, it contributes to escape us from laborious work, save our time, facilitate our lives. Secondly, with computers extensive reach into every corner of the world, a perspective of human life can be shown only with a single keystroke. No matter where we are, in school, business workshops, operating rooms, labs, banks of halls of government, the Internet appears to reflect a perspective of human life. Furthermore, computer profits us by relaxation and entertainment it provides. But on the other hand, some people debate that it is also inconvenient, waste the time,

isolated us from people only with the company of computers, and make our lives more complicated. Some people repair the most sophisticated computer but can't mend a pair of socks. Yet in fact, computer collapses the distances and demolishes all boundaries. Whether computer is a blessing or a curse, depends on different circumstance and the way you use it. As a new millennium approach, we look forward to constructing a new fantasyland by combination with the wealth this new age will bring and the high technology it will provide.

体罚的坏处 Parents usually expect too much while raising their children. As a result, when it comes to discipline, most of them let temper flare out of control by executing physical punishment to their children. They believe bitter pills have wholesome sweet and they always in a panic that down to crime for youngsters is easy without pain tastes. Investigations showed that half of parents use punishment once or more, no matter their ethnicity, age, and socioeconomic groups. However, despite the benefits it will bring, physical punishment is a hazard, which affects not only children, but also the parents themselves. On the first place, punishment can exert a bad impact on children by experience of serious reprocessing, with its evident contribution to children's mental illness. Several studies showed that most frequent physical punishment with maltreatment maybe lead to depression, juvenile crimes and even suicide. Thus, most countries have already passed laws banning disciplinary action that inflicts physical suffering on a child. On the other hand, parents might also affect by their punishment behavior. When they lose their temper with their kids, they might feel irritated, sometimes even

worse than children do. Moreover, the physical punishment, regardless its original intentions, has a negative impact on the bond between parents and children, on the account of frustrations, misunderstandings and even tears it will bring. Taking all those factors into consideration, I would argue that law are not the key to a violence-free, psychologically healthy upbringing, communication is. While Parents are establishing a bridge with a child during dialogue and equally exchange, they will both profit from it. Remember, serious punishment add sorrow and pain to our life, on the contrary, communication is the only remedy for better family relationship. 说谎有没有必要 Telling lie is usually looked upon as an evil, because some people try to get benefit from dishonest means or try to conceal their faults. On the other hand, honesty is widely recognized as the best policy. Parents always try to prove the benefits of being honest when you are a little child. A good story in this regard is .One day the child Washington chop down his farther s favorite cherry tree. although knowing he would deserve to be punished, he told his father the truth. Unexpected, his farther apprised him rather than executing a punishment. moreover, he was encouraged to maintain the good manner all the time. As known to all, the honest boy eventually became one of the greatest presidents in American history. However, telling lie, despite its negative effects, sometimes is essential in our daily life. First, the liar itself will benefit from the lie by escaping from the pressure of unnecessary embarrassment. On the other hand, the listener will feel more comfortable by reasonable excuses. For example, if a little girls farther

died in an accident, her mother would comfort her by saying " farther has gone to another beautiful land". In such cases, a lie with original goodwill is like a naught angel who might make the cruel nice.

Furthermore, To some extent, the skills of telling lie can be regard as a capacity of creation and imagination. Taking all those factors into consideration, we can definitely come to the conclusion that whether telling lie is harmful depends on its original intention and the

ultimate result it will bring. If one is honest with oneself, one always learns from mistakes, can correct a concept or a hypothesis and work further, and reach the goal finally. 你永不能忍着痛转身 你永不能

完成你自己 你们散落在花园里 你们只能紧紧相依偎 补充日

期: 2002-07-08 15:46:50国防的重要性As mass production is the

core principle of industrial economy, mass destruction becomes the core principle of this age. Warfare, as the result of violence pushed to its utmost abounds, has been posing a great threat to all the nations

for a long history. First, although most of tax money goes into the national defense budget, an ounce of prevention is worth of a pound

of cure. After the first-ever atom bomb 0dropped on the Japanese city on August 6,1945, more than 140,000 people were killed in the

atomic blast and tens of thousands of others died from the after

effects of radiation. Since then, the technique of battle systems has

already gone through several generations. On the other hand, despite the generally peaceful world, local wars and racial segregations never

been disconnected. At the same time, business and governments constantly jockey for advantage over each other, sometimes relying

on less-than-legal measures including warfare. Furthermore, the

computer terrorist can inflict damage on millions of people with a single keystroke, sowing fear, suspicion, and doubt. If the terrorisms in "9.11" used the atom bomb instead of aircraft, New York would have been destroyed to empty land. That is the reason why American never gave up his research in military might. Of course, arguments will be raised against my standpoint. Some people criticize it on the grounds that these problems can be resolved through diplomacy and dialogue. However, in my opinion, the unavoidable Information Warfare will be waged because it can be. History clearly shows that any new technology, regardless of its original intentions, soon finds its way into the warriors. In conclusion, we, no matter individuals or governments, must prepare for the future we are creating. 那个题目好象讲国家用了太多钱花在国防上，应该用来提高人民生活水平，我说的是国防很重要，不知道老师会不会觉得不妥呢：]环境问题
