幽灵，是隐蔽的罪犯。他们不仅攻击个人电脑系统，而且也攻击公共电子网络系统，从而造成大面积的网络瘫痪或设备损坏。黑客之害，甚于地震、飓风等自然灾害，可谓“罪大恶极”。那么，我们该如何对付这些藏在暗处的“高手”呢？

Now more and more people buy and sell goods on the Internet. Hackers around the world are interested in this. Hackers are often young people who love computers greatly. They use computers to get on the Internet, looking for ways to go into computer systems (系统) run by banks, homes and all kinds of offices. If they go into a computer system, they will find other people's credit cards (信用卡) and try to steal the numbers. With the numbers they can take the money out of the bank. Hackers often break into your computer system, but it's difficult to find them. So it is also difficult for you to find the hacker who is taking your money out of the bank. Hackers can get the money from a bank with the credit card number they have got from your computer. Scientists always ask people who have computers to pay attention to hackers. They also tell people how to fight against the hackers. The answer is to choose clever numbers and change them often and not to show your credit card out to anybody. If you are not careful enough, it's just like keeping the bank door wide open. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
