A university education can be seen as a process of improving students' analytical thinking. The variety of courses offered at university inspires students in various ways, therefore improving their analytical ability. For example, science courses such as math and biology help students develop a rational way of thinking whereas arts courses such as literature 123ve to let students ponder over issues from a logical, multi-dimensional perspective. and courses in social sciences force students to recognize the ideas that have been traditionally assumed to be acceptable and unproblematic. With the development of these types of analytical thinking, graduates can face future challenges with more confidence and enthusiasm. Also, university education is expected to improve students' moral standards. This is rooted in universities' belief that students' awar123ss of responsibility towards their community and their country is of high importance. In this ever-deg123rating society and civilization, students are encouraged actively participate in improving the local community. A university that provides care and facilities for physically disadvantaged students may inspire the graduates to better handle situations in the future where they may

have to interact with the disabled community. A successful university education is supposed to produce morally sound graduates, therefore increasing their employability. In conclusion, university education not only helps students locate a decent job but will also develop other qualities such as enhancing their analytical skills and cultivating their hunger and spirit for life. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 [www.100test.com](http://www.100test.com)
