

Hibernate编写通用数据库操作代码 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/182/2021_2022_Hibernate_E7_c104_182505.htm

insert方法public void insert(Object o){ Session session = HibernateSessionFactory.currentSession(). Transaction t = session.beginTransaction(). session.save(o). t.commit().

HibernateSessionFactory.closeSession().} 0delete方法public void

0delete(Object o,Serializable id){ Session session =

HibernateSessionFactory.currentSession(): Transaction t =

session.beginTransaction(). Object o = session.get(o.class,id).

if(o!=null){ session.0delete(o). } t.commit().

HibernateSessionFactory.closeSession().} 0update方法public void

0update(Object o,Serializable id){ Session session =

HibernateSessionFactory.currentSession(). Transaction t =

session.beginTransaction(). session.0update(o,id). t.commit().

HibernateSessionFactory.closeSession().} 基于HQL的通用0select

方法public ArrayList 0select(String sql){ Session session =

HibernateSessionFactory.currentSession(). Query query =

createQuery(sql). List list = query.list().

HibernateSessionFactory.closeSession(). return (ArrayList)list.} 基

于SQL的通用0select方法public ArrayList 0select(String sql) throws

Exception{ Session session =

HibernateSessionFactory.currentSession(). Connection con =

session.connection(). PreparedStatement pstmt =

con.prepareStatement(sql). ResultSet rs = pstmt.executeQuery().

ResultSetMetaData rsmd = rs.getMetaData(). Hashtable ht = null.

```
ArrayList array = new ArrayList(). while(rs.next()){ ht = new  
Hashtable(). for(int i=0;i ht.put(rsmd.getColumnName(i  
1),rs.getObject(i 1)). } array.add(ht). }  
HibernateSessionFactory.clossSession(). return array.}
```
