1. Read the following descriptions of Midtown High School and John Jay High school. two schools in which Olivia, who moved during the summer and is entering her junior year, is considering enrolling. Then, in the space provided, write an argument for the choice you think Olivia should make. The following considerations should guide your thinking. (1) Olivia wants a curriculum that will prepare her for college. (2) Olivia wants to participate in extracurricular activity, particularly gymnastics. (3) Olivia is worried that she will not make friends quickly. Midtown High School has a student body of 10,000, and average class size is 35 to 37. Because it is a large school, Midtown offers a wide variety of courses, including vocational training and advanced courses in chemistry, physics and math. Each year students from Midtown capture several of the state's top

academic awards. Midtown offers a wide range of extracurricular activities, and its gymnastics team placed third in state competition last year. John Jay High School has a student body of 2,000, and average class size is 15 to 17. The school was established to offer academically challenging courses for talented students. In the senior year, a student is allowed to register for courses at the community college across the street from John Jay. Because the primary focus of the school is on academics, its few clubs are oriented toward areas of academic interest. For example, the school has a Science Club, a Math Club, and a Latin Club. Last year, one of the teachers, a former college gymnast, started a gymnastics program that will prepare her for college. Second, at John Jay, Olivia will make friends and third, she will have the opportunity to participate in gymnastics. John Jay will prepare Olivia for the challenges of college in two respects. The courses at John Jay are designed for talented students, so they must be difficult. Additionally, in her year, Olivia can learn firsthand what college is like. Olivia will have the opportunity to make friends at John Jay because the size of the student body is not overwhelmingly large. Moreover, the fact that the average class size is only fifteen to seventeen students suggests that classes will not be very formal. Finally, John Jay has a relatively new gymnastics team, so Olivia should be able to participate in many events. Further, she will be able to learn by watching college gymnasts practice. Although Midtown does offer some advantages, Olivia would be better able to achieve goals at John Jay.

2. Read the following proposals

of Johnson and Edwards, two members of the vill Coventry Town Council, who have to decide how to spend the \$ 100, 000 that Mrs. Wh left the village in her will. Then in the space provided, write an argument in favor of the pi you think the Town Council should choose. The following considerations must be taken ii count: (I) The will stipulates that the money must be used for the benefit of the children of I try. (2) The Town Council wants to spend the money on a project that will benefit busi Coventry. JOHNSON has proposed that the money be used for a park. Part of the park will b
