； First, you need to show why youre interested in biology. It could be just a brief history, a class or something that turned on your interest. But dont give the impression of being too romantic. He told me about a bad statement, in which a Chinese student told the story of when he was 2 years old and his mother showed him a tadpole and hes been interested in biology ever since then and bla bla bla...

； Third, tell why you want to be a Ph.D. This is generally showing that youre interested in research.

； They also said that they are looking for someone with genuine interest in biology research and they expect this expressed in the statement. Since youve been working so long, you can sound more mature or formal when describing your lab experience. And, dont make the statement too long, they get tired out before reaching the end. You can have your script read by some other teachers and have some feedback on what they think of it.

； I took some time to read your statement. Its telling. Anyway, I talked with the chair of our department today and asked about his opinion on what he expects one to be. He gave me a few points:

； Second, tell what kind of field you would want to work in. Dont be too specific because if theres no one in the department doing such a thing, the committee will think you wont be satisfied when you get here. So, you may check first to make sure

that the research area you want in represented in the department. I told them you have been in the lab. Them means the chair and his wife. They said you should stress that in your statement. I think you can write about what your lab is doing, what kind of experimental techniques are you using and what your role is in there. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
