结构类型：图文写实(与暑期作文:冷漠和谐社会等同) 内容类型：人与自然 内容基调：批判(城市的盲目建设所导致的自然

自源的破坏) 注：领航学员在掌握此文的前提下务必对暑期大作文 - 诚信的内容全方位把握。 As is betrayed in the picture, a lady and a gentleman are watching an artificial scene on the top of a building, with numerous tower blocks surrounding it. Much as it is simple, the drawing sets us sinking in. Accordingly, what this far-reaching picture conveys lends support to illustrate the fact that too many man-made projects such as skyscrapers have excessively been built, whereas too much natural resources including afforested land has been exhausted appallingly. It can be safely, therefore, said that the blind actions and activities of human beings in the urban development should be checked, with nowadays values of scientific development echoed vigorously. why does this capture our attention? several points analyzed below might help us gain an insight into the dramatic change to which we have been qualified to bear witness. To begin with, over the past decades, much arable land has been destroyed in the rush for rapid urban development. Such blind development has damaged the natural balance to the point where people only live in a box of lifeless cement and steel. What is more, most people still lack the concept of scientific development. Some urban planners and designers focus their attention simply on their

immediate interests and problems ,which has? in turn degraded wretchedly the quality of our living environment. As many famous ecologists point out that a cluster of high-rise buildings in a city often overburden living capacities, which once could afford to residents enough. Consequently , no issue in china is as basic to give an expression to inherent spirit of scientific development as restraint unbridled urban development. Judging from what has been argued above, people have come to realize the harms arising from indiscriminate development has been, like the Pandora ' s box, the crippling force of following the values of scientific development. It is , therefore, necessary that some effective steps be made to lay much emphasis on the harms from blind development at the expense of the balance of eco-system . For one thing, the government should make law to channel construction to the track of values of scientific development , for, if not, our descendants would be thrown into unexpected crises. For another, people should enhance the awareness that environmental problems can not be separated from those of human welfare and from the process of economic development in general. Only by undergoing these measures, can we make our society, where birds are singing and flowers are giving forth their fragrance here and there, appeal to everyone.
