

acce 新手来看：如何重复上一条记录？PDF转换可能丢失图片或格式，建议阅读原文

[https://www.100test.com/kao\\_ti2020/251/2021\\_2022\\_acce\\_\\_E6\\_96\\_B0\\_E6\\_89\\_c97\\_251682.htm](https://www.100test.com/kao_ti2020/251/2021_2022_acce__E6_96_B0_E6_89_c97_251682.htm) 问题：如何重复上一条记录？有一个窗体,上面有多个文本框和组合框,因为目录这笔资料与下一笔资料大部门都是一样的,能不能利用copy功能把上一笔的资料复制到下一笔的相对应的文本框和组合框内.最好是做成按钮式,即一个复制按钮和一个粘贴按钮。方法一：很多软件里面都有这个功能啊？原理非常简单。只要添加一个command BUTTON 就可以了。添加记录的代码相信大家知道了。Private Sub Command16\_Click()On Error GoTo Err\_Command16\_Click DoCmd.GoToRecord , , acNewRecexit\_command16\_click: Exit Suberr\_command16\_click: MsgBox Err.Description Resume Exit\_Command16\_Click End Sub我们更改一下即可，比如说现在有一个文本框，当然了，实际情况你可以再加代码，或者干脆用CONTROLS循环来做。Private Sub Command16\_Click()On Error GoTo Err\_Command16\_Click dim strTemp as string strTemp=TextBox1.value 原理很简单，先将控件值赋值给变量然后在添加记录后再将该变量值赋值给控件 DoCmd.GoToRecord , , acNewRec TextBox1.value=strTempExit\_Command16\_Click: Exit Suberr\_command16\_click: MsgBox Err.Description Resume Exit\_Command16\_Click End Sub另外 Ctrl (单引号)可以复制上一条记录同一字段内容。方法二：用controls循环的代码如下：Private Sub AutoWriteRecord()自适应On Error GoTo

```

Err_AutoWriteRecord Dim D 创建一个变量 Set D =
CreateObject("Scripting.Dictionary") Dim i As Long For i = 0 To
Me.Controls.Count - 1 If Me.Controls(i).ControlType = acTextBox
_ Or Me.Controls(i).ControlType = acComboBox _ Or
Me.Controls(i).ControlType = acListBox _ Or
Me.Controls(i).ControlType = acCheckBox _ Or
Me.Controls(i).ControlType = acOptionButton Then If
Me.Controls(i).Name "编号" Then 自动编号字段不可写，所以
除外，可以用on error resume next 忽略 D.Add
Me.Controls(i).Name, Me.Controls(i).Value End If End If Next i 原
理很简单，先将控件值赋值给变量 然后在添加记录后再将该
变量值赋值给控件 DoCmd.GoToRecord , , acNewRec Dim K K
= D.keys For i = 0 To D.Count - 1 Me.Controls(K(i)).Value =
D(K(i)) Next i Set D = Nothing Exit_AutoWriteRecord: Exit
Suberr_autowriterecord: MsgBox Err.Description Resume
Exit_AutoWriteRecord End Sub Private Sub
AutoWriteRecord_1(strControlName As String)人工定义控件
名On Error GoTo Err_AutoWriteRecord Dim D 创建一个变量
Set D = CreateObject("Scripting.Dictionary") Dim strSName() As
String strSName = Split(strControlName, ".") Dim i As Long For i =
0 To UBound(strSName) - 1 D.Add strSName(i),
Me.Controls(strSName(i)).Value Next i 原理很简单，先将控件
值赋值给变量 然后在添加记录后再将该变量值赋值给控件
DoCmd.GoToRecord , , acNewRec For i = 0 To
UBound(strSName) - 1 Me.Controls(strSName(i)).Value =
D(strSName(i)) Next i Set D = Nothing Exit_AutoWriteRecord:

```

Exit Suberr\_autowriterecord: MsgBox Err.Description Resume

Exit\_AutoWriteRecord End Sub测试：Private Sub

Command16\_Click() AutoWriteRecord AutoWriteRecord\_1 "字  
段1.字段2.字段4."End Sub 100Test 下载频道开通，各类考试题目
