

Acce 中如何设定鼠标指针？PDF转换可能丢失图片或格式，

```
alxSetCursor Lib "user32" Alias "SetCursor" (ByVal hCursor As Long) As Long  
将指定的鼠标指针设为当前指针  
Private Declare Function alxGetCursor Lib "user32" Alias "GetCursor" () As Long  
获取目前选择的鼠标指针的句柄  
Private Sub MouseType()取得左右形光标的值  
Screen.MousePointer = 9 设屏幕鼠标为9（左右型鼠标）。  
lngMouseOne = alxGetCursor() 返回左右型鼠标在WINDOWS(2000\98\XP)的值。  
Screen.MousePointer = 7 设屏幕鼠标为11（沙漏）。  
lngMouseTwo = alxGetCursor() 返回左右型鼠标在WINDOWS(2000\98\XP)的值。
```

Screen.MousePointer = 0 重设屏幕鼠标为0（ACCESS自确定）。

blTextout = False blTextlook = False
End Sub
方法二：随便找一个 .cur文件copy到mdb文件相同的目录

```
Private Declare Function CopyCursor Lib "user32" Alias "CopyIcon" (ByVal hcur As Long) As Long  
Private Declare Function LoadCursorFromFile Lib "user32" Alias "LoadCursorFromFileA" (ByVal lpstrCurFile As String) As Long  
Private Declare Function GetCursor Lib "user32" () As Long  
Private Declare Function SetSystemCursor Lib "user32" (ByVal hcur As Long, ByVal id As Long) As Long  
Private Const OCR_NORMAL = 32512  
Dim lngMyCursor As Long  
Dim lngSystemCursor As Long
```

Private Sub cmdMyCursor_Click() 更改指针样式
Dim strCurFile As String
strCurFile =

CurrentProject.Path "\Cursor.cur" 可随意调用其他的.cur鼠标样

```
式文件，以达到显示各种指针的目的 lngMyCursor =  
LoadCursorFromFile(strCurFile) lngSystemCursor = GetCursor()  
lngSystemCursor = CopyCursor(lngSystemCursor)  
SetSystemCursor lngMyCursor, OCR_NORMAL Text1.SetFocus  
Text1.Text = "鼠标指针已经设定为您要的状态"  
cmdMyCursor.Enabled = False cmdSystemCursor.Enabled =  
TrueEnd Sub private Sub cmdSystemCursor_Click() 恢复系统指  
针样式 SetSystemCursor lngSystemCursor, OCR_NORMAL  
Text1.SetFocus Text1.Text = "鼠标指针已经恢复为系统状态"  
cmdMyCursor.Enabled = True cmdSystemCursor.Enabled = False  
lngSystemCursor = 0End Subprivate Sub Form_Close() If  
lngSystemCursor 0 Then SetSystemCursor lngSystemCursor,  
OCR_NORMALEnd Subprivate Sub Form_Unload(Cancel As  
Integer) If lngSystemCursor 0 Then SetSystemCursor  
lngSystemCursor, OCR_NORMALEnd Sub 100Test 下载频道开
