工程: 在eclipse中建立一个java project. Code highlighting produced by Actipro CodeHighlighter

(freeware)<http://www.CodeHighlighter.com/AntTest-src-com.test-ABS.java-ABSTest.java> (JUnit Test Case)-lib-build.xml-JUNIT\_HOME/junit.jar配置:

eclipse->window->preference->ANT->Runtime->Classpath->ANT Home Entry 选择Add External JAR，加

入ECLIPSE\_HOME/plugins/org.junit.../junit.jar build.xml的内容:

Code highlighting produced by Actipro CodeHighlighter

(freeware)<http://www.CodeHighlighter.com/12> xml version="1.0"

?>3 project name ="project" default ="junit" >4 property name

="run.classpath" value ="bin" > property >5 property name

="run.srcpath" value ="src" > property >6 property name

="test.srcpath" value ="src" > property >7 property name

="test.report" value ="report" > property >8 property name

="lib.dir" value ="lib" />9 path id ="compile.path" >10 fileset dir

="lib.dir" >11 include name ="\*\*/\*.jar" />12 fileset >13 path >14

target name ="compile" >15 javac destdir ="\${run.classpath}" srcdir

="run.srcpath" classpathref ="compile.path" />16 javac destdir

="run.classpath" srcdir ="\${test.srcpath}" classpathref

="compile.path" />17 target >18 target name ="junit" depends

```
= "compile" >19 tstamp />20 mkdir dir = "${test.report}" />21 mkdir
dir = "${test.report}/framework-${DSTAMP}-${TSTAMP}" />22
junit printsummary = "true" >23 classpath >24 pathelement path
= "${run.classpath}" />25 fileset dir = "${lib.dir}" >26 include name
= "**/*.jar" />27 fileset >28 classpath >29 formatter type = "plain"
/>30 batchtest fork = "yes" todir
= "${test.report}/framework-${DSTAMP}-${TSTAMP}" >31 fileset
dir = "${test.srcpath}" >32 include name = "**/*Test.java" />33 fileset
>34 batchtest >35 junit >36 target >37 project > 运行: 右
键build.xml->run as "Ant Build". 结果: 控制台有输出结果,例如:
