

Taglib的打包部署和使用方式详解 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/273/2021_2022_Taglib_E7_9A_84_E6_c104_273292.htm 1. Taglib的编写 Taglib用于将呈现逻辑进行封装。它必须继承自TagSupport类。下面是一个简单的例子：

```
package org.topxp.taglib; import java.io.IOException;
import java.util.Date; import javax.servlet.jsp.JspException; import
javax.servlet.jsp.JspWriter; import
javax.servlet.jsp.tagext.TagSupport; public class OutTag extends
TagSupport { /** * @see
javax.servlet.jsp.tagext.TagSupport#doEndTag() */ @Override
public int doEndTag() throws JspException { JspWriter out =
this.pageContext.getOut(); try { out.println("当前的时间是："
new Date()); } catch (IOException e) { throw new JspException(e);
} return EVAL_PAGE; } /** * @see
javax.servlet.jsp.tagext.TagSupport#doStartTag() */ @Override
public int doStartTag() throws JspException { return
super.doStartTag(); } } 2. tld文件
```

```
"http://java.sun.com/dtd/web-jsptaglibrary_1_2.dtd"> 1.0 1.2 diego
out org.topxp.taglib.OutTag empty name false false 100Test 下载频
