、难度提升2、词汇难度提高 Its difficult to imagine the sea ever running out of fish. Its so vast, so deep, so (S1) mysterious.

Unfortunately, its not bottomless. Over-fishing, (S2) coupled with destructive fishing practices, is killing of the fish and (S3) ruining their environment. Destroy the fish, and you destroy the fishermens means of living. At least 60 (S4) percent of the worlds commercially important fish (S5) species are already over-fished, or fished to the limit. As a result, governments have had to close down some areas of sea to commercial fishing. Big, high-tech fleets (S6) ensure that everything in their path is pulled out of water. Anything too small, or the wrong thing, is thrown back either dead or dying. thats an (S7) average of more than 20 million metric tons every year. (S8) When you consider that equals a quarter of the world catch, you begin to see the size of the problem. In some parts of the world, for every kilogram of prawns (对虾) caught, up to 15 kilograms of unsuspecting fish and other marine wildlife die, simply for being in the wrong place at the wrong time. True, (S9) some countries are beginning to deal with this problem, but its vital we find rational ways of fishing before every ocean becomes a dead sea. (S10) It would make sense to give the fish enough time to recover, grow to full size and reproduce, then catch them in a way that doesnt kill other innocent sea life. 100Test 下载频道开通，各类考试题目直接下
