Some people think that
they can learn better by themselves than with a teacher. Others think
that it is always better to have a teacher. Which do you prefer? Use
specific reasons to develop your essay. A lot of successful stories in
which the main characters did not go to school but achieved unusual
accomplishments by teaching themselves are told in many countries
and inspired many people to pursue their dreams. However, for
common people, the efficient and attractive way of learning is to
have a teacher. Teachers can clarify the learning goals or directions,
interact with students, and create effective learning spheres. To begin
with, teachers set a clear study plan and direction for students. How
can students quickly involve in the new field? What can students
achieve after finishing learning? Teachers try to answer these
questions by appointing reading materials, giving lectures, evaluating
students. By such diverse approaches, students can learn more about
what they are taking, and understand what they are studying. On the
other hand, learning by themselves, people do not know where to go
and what to read. Eventually, they lose their interests or lack sound
knowledge in their field. There is another important factor affecting
learninginteraction. Apparently, teachers can ask question to assess
how well students understand. in turn, students raise their confusions
to require answers. The interaction between teachers and students
results to further improvements of the learning and to more clear

directions. In contrast, learning by themselves, people cannot receive the necessary and sound information. Even though they have questions about the subjects, they cannot get the answers immediately, and they do not have opportunity to discuss deeply. Finally, students who learn from teachers have a more effective learning spheres associated with classmates or professionals. Not only can students discuss questions and hence make more progress, but also establish solid network that enable them to access to 0updated information. However, learning by themselves, people are alone in their learning. Furthermore, they cannot 0update their knowledge that is critical for the learning. Therefore, comparing with learning by people themselves, learning from teachers is more effective and efficient. Those students who learn from teachers form a network in their field as well as getting 0updated knowledge. When people want to study, do not forget to get a teacher.　　　　　:A lot of successful stories (　　　　　　　　　　　　　　"
