

Linux与Windows共享文件SAMBA PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/291/2021_2022_Linux_E4_B8_8EWi_c103_291012.htm

a) 先配置/etc/samba/smb.conf

```
cat /etc/samba/smb.conf  
workgroup = linuxgroup  
server string = linux-smb  
dos charset = cp936  
unix charset = utf8  
hosts allow = 192.168.1. #允许的连接的IP段，这里要注意一下  
log file = /var/log/samba/%m.log  
max log size = 50  
socket options = TCP_NODELAY  
security = user  
encrypt passwords = yes  
smb passwd file = /etc/samba/smbpasswd  
username map = /etc/samba/smbusers  
dns proxy = no  
[share] path = /mnt/share/  
; guest ok = yes  
browseable = yes  
create mask = 0755  
writeable = yes
```

EOF

b) 创建smbpasswd文件，并添加用户

```
cat /etc/passwd | mksmbpasswd.awk > /etc/samba/smbpasswd  
smbpasswd -ae $USER
```

其中mksmbpasswd.awk脚本在samba源码包的某个目录中有，\$USER是指一个用户名，用这个用户名和设置的密码登入SAMBA服务器

c) 连接在Windows中访问SAMBA服务器，只要在网络邻居中添加一个连接就可以，输入地址时输入类似\\192.168.1.1\share的地址。
