A fast-growing maple tree and slower-growing dogwood compete for the sunlight they both need. Oil competes with coal and nuclear power as an energy source for electric power plants! There is a problem. There is a limited amount of space for birds, sunlight for trees, and energy for people! If we do not cut back on our uses of some of our resources, someday they will be gone! How can we use energy today and know we will have enough to go around in the future? We can choose alternate, or replacement, energy resources. It takes the earth millions of years to create coal, oil, and gas. They are nonrenewable resources. Solar energy, wind energy and water energy are renewable resources. It takes the earth millions of years to create coal, oil, and gas. They are nonrenewable resources. Solar energy, wind energy and water energy are renewable. What other ways can we conserve our sources? How can we make sure there is always enough to go around? Useful words and expressions: 1. bluebird 蓝知更鸟 2. sparrow 麻雀 3. dogwood 山茱萸 4. power plant 发电厂，发电站 5. alternate 替换物 6. nonrenewable resources 不可再生资源 7. conserve 保存，保藏 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
