

详细介绍两种动态定义游标的方法 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/474/2021_2022__E8_AF_A6_E7_BB_86_E4_BB_8B_E7_c67_474971.htm 方法一：不知道多输出参数如何写：

```
declare @cursor_name varchar(36),@str  
nvarchar(4000)0select @cursor_name=newid() DECLARE @ckbm  
varchar(20) exec(DECLARE [ @cursor_name ] CURSOR FOR  
0select f_ckbm from tbda_ck)exec(open [ @cursor_name ])set  
@str=Nfetch from [ @cursor_name ] into @ckbmexec sp_executesql  
@str,N@ckbm varchar(20) out,@ckbm outwhile @@fetch_status = 0  
begin print @ckbm exec sp_executesql @str,N@ckbm varchar(20)  
out,@ckbm outendexec(close [ @cursor_name ])exec(deallocate [ @cursor_name ])
```

方法二：可以实现多输出参数

```
declare  
@sqlExec varchar(8000),@tableName varchar(255),@myvar  
varchar(20) set @tableName = Checkbag_info set @sqlExec =  
declare cursor1 cursor for CHAR(13) set @sqlExec = @sqlExec  
0select res_sort from @tableName exec(@sqlExec) open cursor1  
fetch next from cursor1 into @myvar while @@fetch_status = 0 begin  
print @myvar fetch next from cursor1 into @myvar end close  
cursor1 deallocate cursor1
```
