Some folks prefer electric ones to textbooks. Such books are obviously handy and convenient. and thanks to their multi-functions. they are conducive to their readers, who can obtain much relatively updated information, However, every coin has two sides. Nowadays, fewer people has time sitting before computer reading E-books. Even if time is available, those so-called devices named packable readers may also be restricted by virtue of lacking electricity. When it comes to traditional books, they also have their own superiorities. Many individuals often maintain that they are more convenient than e-books, for people have no restrictions in using them. whenever you are or whenever you are or wherever you go, you can bring some books for reading. On the other hand, traditional books are more available because they are sold in various bookshops. However, although traditional books possess such advantages, they also have some deficiencies. For instance, traditional books are not easily portable so it is inconvenient for people to carry more once they need and they are vulnerable to water and fire. Therefore, my view is that we should utilize the e-books appropriately, as well as the traditional textbooks

because of their diverse functions in our practical daily life, and one thing that we should bear in my mind is that great importance should be attached to both of them. In a sense only when their relationships are balanced could their utilities and functions are brought into full play. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
