But sometime you see an African elephant, too. You can easily tell the two apart by looking at their ears. African elephants have ears at least twice as big as those of an Indian elephant. But there are also many other differences between the Indian elephant and its African cousin. The Indian elephant has a bulging forehead and a back usually has a dip in it behind the shoulders. The trunk of the Indian lobe (圆形突出部) at the tip instead of the two fingers possessed by the African species. Indian elephants have five toenails on their front feet and four on their hind feet. African elephants may have one nail fewer on each foot. Indian elephants roam the forests of Indian , Sri Lanka, Burma, Malaysia, Sumatra, and Borneo. African elephants divide African elephants into two species-the large bush elephant and the smaller forest elephant. The forest elephant lives in the Congo River basin. It has smaller, rounder ears and it grows only about 2.5meters (8 feet) tall. Adult bush elephants are somewhat large even than Indian elephants. Big males may be 3.5 meters(11.5 feet) high at the shoulder and weigh more than 6 metric (米制的) tons. Both Indian and African elephants have all the toes on each foot enclosed in a common covering of skin. Only the toenails show. Both a s adults, have tough, leathery hides that may be an inch thick. Both have very little hair. Bt their eyes are fringed with lashes that sometimes measure more than

12 centimeters (5 inches) long. And their tails are tipped with clusters of thick, wiry hair. Both Indian and African elephants live in herds, and their ways of life are very much the same.
