项测试任务：(1)1—4题要求从所给的6个选项中为第25段每段选择1个正确的小标题；(2)第58题要求从所给的6个选项中选择4个正确的选项，分别完成每个句子。请将答案涂在答题卡

相应的位置上。 Pregnant women warned about ACE inhibitor
Some of the most commonly used medicines for high blood pressure are drugs called ACE inhibitors . Doctors have given these drugs to patients for twentyfive years . A government study in the U-nited States found that the use almost doubled between 1995 and 2000 . Doctors have known for years that women should not take ACE inhibitors during the last six months of pregnancy . The medicine can injure the baby . ACE inhibitors , though , have been considered safe when taken during the first three months . But a new study has found that women who take these drugs early in their pregnancy still increase the risk of birth disorders . The study shows that compared to others , their babies were almost three times as likely to be born with major problems . These included problems with the formation of the brain and nervous system and holes in the heart . The researchers say they found no increased risk in women who took other blood pressure medicines during the first three months . Researchers at Vanderbilt University in Tennessee and Boston University did the study . The New England Journal of Medicine published the results . The researchers studied the records

of almost thirty thousand births between 1985 and 2000 . Two hundred nine babies were born to women who took ACE inhibitors during the first three months of their pregnancies . Eighteen of the babies , or almost nine percent , had major disorders . ACE inhibitors are often given to patients with diabetes . But diabetes during pregnancy can result in birth defects . So the study did not include any women known to be diabetic . ACE inhibitors suppress a protein called angiotensin-converting enzyme , or ACE . This enzyme produces a chemical in the body that makes blood passages narrower . The drugs increase the flow of blood so pressure is reduced . New drugs are tested on pregnant animals to see if they might cause birth defects in humans . But experts say these tests are not always dependable . The United States Food and Drug Administration helped pay for the study . The F . D . A . says women who might become pregnant should talk with their doctor about other ways to treat high blood pressure . 练习 : 1

1 . Paragraph 2 _____ 2 . Paragraph 3 _____ 3 . Paragraph 4 _____ 4

5 . Paragraph 5 _____ A Effects of ACE and ACE inhibitors B Wide use of ACE inhibitors C How to deal with high blood pressure in pregnant women D Damage to pregnant women ' s future babies E Suggestions on stopping the use of ACE inhibitors F Relative safety for women during the first three months of pregnancies 5 . FDA suggests that pregnant women with high blood pressure should consult . 把职称英语页面加入收藏 6 . ACE inhibitors are not recommended . 7.Evidence showed only a small

percentage of babies suffered major disorders . 8 . ACE is a risk factor to our body .
