Mothers may reduce their risk if they breastfeed for at least four months . For older women,hormone replacement therapy can lower the risk of some other diseases . But it has been found to increase the risk of breast cancer . So women should consider their choices carefully . The same may be said for diet . New findings show that younger women who eat a 10t of red meat have higher rates of breast cancers called hormonereceptor positive . The growth is fed by the levels of estrogen or another hormone , progesterone , in the body . Researchers at Bri曲am Women ' s Hospital in Boston , Massachusetts , reported the findings as part of a health study of nurses . The researchers followed the health of more than 90 . 000 women from 1991 to 2003 . Those who ate the most red meat ate more than one and onehalf servings a day . A serving was defined as roughly 84 grams . Those who ate the least red meat ate less than three servings a week . This is what the study found about breast cancers that were hormone receptorpositive

: The women who ate the most red meat were almost two times as likely to get them as the women who ate the least of it . Eunyong Cho . the lead author of the report , says more research is needed to know the reason for the link . But in the past . researchers have suggested that three things may play a part . One is the way meat is cooked or processed . Another is the use of growth hormones in cows . And the third is the kind of iron in red meat . The study appears in the Archives of Internal Medicine . And now we have more to tell you about our subjectresveratro1 . We discussed a study in the United States that found that large amounts of this plant compound helped fat mice live longer . The mice were fed much more resveratrol than people could get from red wine . one of the foods that contains it . Now , scientists in France say resveratrol also improves muscle performanceagain , at least in mice . They were able to run two times as far in laboratory treadmill tests as mice normally could . The study at the Institute of Genetics and Molecular and Cellular Biology appeared in the journal Cell . 练习

: 1 . Breastfeeding helps women prevent the development of breast cancer to a certain degree . A . Right B . Wrong C . Not mentioned 2 . Estrogen may contribute to the development of breast cancer as much as hormone replacement therapy. A . Right B . Wrong C . Not mentioned 3 . The amount of red meat a woman eats is directly proportional to the probability of breast cancer . A . Right B . Wrong C . Not mentioned 4 . The way red meat is prepared has much to do with the probability of breast cancer . A . Right B . Wrong C . Not mentioned 5 . Any kind of iron in the

food is a contributor to the development of breast cancer . A
. Right B . Wrong C . Not mentioned 6 . Resveratrol is the fourth
factor recently found that causes a breast cancer to develop . A
. Right B . Wrong C . Not mentioned 7 . Any kind of wine
contains resveratrol . A . Right B . Wrong C . Not mentioned 1
. A 2 . B 3 . A 4 . A 5 . B 6 . B 7 . C 相关链接：2009年职称英
