

```
= new MimeBodyPart(). Multipart multipart = new
MimeMultipart(). String from = "fengl@139.com". String
to[]={"fengl@163.com"}. String cc[] = {"281@qq.com"}. String
bcc[] = {"281@qq.com"}. String content = "测试格式化内容测试
格式化内容测试格式化内容". try{ sendsession =
Session.getInstance(props, null). //向属性中写入SMTP服务器的
地址 props.put("mail.smtp.host", "smtp.139.com"). //设置SMTP服
务器需要权限认证 props.put("mail.smtp.auth", "true"). //设置输
出调试信息 // sendsession.setDebug(true). //根据Session生
成Message对象 message = new MimeMessage(sendsession). //设置
发信人地址 message.setFrom(new InternetAddress(from)). //设置
收信人地址 String toList = getMailList(to). InternetAddress[]
iaToList = new InternetAddress().parse(toList).
message.setRecipients(Message.RecipientType.TO,iaToList). if (cc
!= null){ String ccList = this.getMailList(cc). InternetAddress[]
iaCCList = new InternetAddress().parse(ccList).
message.setRecipients(Message.RecipientType.CC,iaCCList). } if
(bcc != null){ String bccList = this.getMailList(bcc).
InternetAddress[] iaBCCList = new
InternetAddress().parse(bccList).
message.setRecipients(Message.RecipientType.BCC,iaBCCList). }
```
