Earthquake Every year earthquakes are responsible for a large number of deaths and a vast amount of destruction in various parts of the world. Most of these damaging earthquakes occur either in a narrow belt which surrounds the Pacific Ocean or in a line which extends from Burma to the Alps in Europe. Some of the destruction is directly caused by the quake itself. An example of this is the collapse of buildings as a result of the quake itself. Other damage results from landslides or major fires which are initiated by the quake. There are about a million quakes a year. Fortunately, however, not all of them are destructive. The intensity of an earthquake is measured on the Richter Scale, which goes from 0 upward. The highest scale recorded to date is 8.9. Major damage generally occurs from quakes ranging upwards from 6.0. The actual cause of the quake itself is the breaking of rocks at or below the earth's surface. This is produced by pressure which scientists believe may be due to a number of reasons, two of which are the expansion and contraction of the earth's crust and continental drift. In order to limit the damage and to prevent some of the suffering resulting from earthquakes, scientists are working on ways to enable accurate prediction. Special instruments are used to help people record, for example, shaking of the earth. Scientists are trying to find methods that will enable them to indicate the exact time, location and size of an earthquake. Certain phenomena have

been observed which are believed to be signs of imminent earthquakes. These include strange behaviors of some animals , the changes in the content of mineral water , etc. The magnetic properties of rocks may also display special pattern before major earthquakes happen. EXERCISE : 1. Paragraph 2\_\_\_\_\_. 2. Paragraph 3\_\_\_\_\_. 3. Paragraph 4\_\_\_\_\_. 4. Paragraph 5\_\_\_\_\_. A Earthquakes forecast B Historical records of earthquakes C Intensities of earthquakes D Cause of earthquakes E Indications of earthquakes F Damaging earthquakes 5. Not all damage during an earthquake is caused \_\_\_\_\_. 6. Not all earthquakes are strong enough \_\_\_\_\_. 7. Scientists have been working hard to warn people \_\_\_\_\_. 8. Earthquakes can be predicted by observing \_\_\_\_\_. A by the quake itself B not be prevented C to cause damage of property and loss of lives D of a possible earthquake E the unusual behaviors of some animals F the strong behaviors of human beings KEY : C D A E A C D E 相关推荐：把职称英语页面加入收藏 2009年职称英语考试成绩查询汇总 2009年职称英语考试试题及答案点评专题 编辑推荐：为帮助广大学员有效备考，我们特推出了职称英语2010年网络辅导课程,相信会让大家有耳目一新的视听感受。现在报名职称英语辅导，赠送2009年精品课程及考试E币。点击查看详情》 100Test 下载频道开通，各类考试题目直接下载。详细请访问 [www.100test.com](http://www.100test.com)
