

教你如何通过Oracle游标直接操作Oracle系统表Oracle认证考试 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/637/2021_2022__E6_95_99_E4_BD_A0_E5_A6_82_E4_c102_637970.htm 在ABAP编程中，有时候需要利用Native SQL操作数据库表(自定义和非业务数据的表，业务数据表我的建议还是应该通过SAP提供的类、函数，BAPI等技术操作)。下面的例子是通过游标操作Oracle的系统表的代码，供大家参考。

```
*-----* * Read information
about partitions of a table
*-----* FORM
get_partition_info USING i_tablnm TYPE rsd_tablnm
CHANGING e_ts_part_info TYPE rsdu_ts_part_info. DATA:
l_s_part_info TYPE rsdu_s_part_info. * this works only for Oracle
CHECK sy-dbsys = ORACLE. EXEC SQL. open csr for 0select
partition_name, high_value from user_tab_partitions where
table_name = :i_tablnm ENDEXEC. DO. EXEC SQL. fetch next csr
into :l_s_part_info-partition_name, :l_s_part_info-high_value
ENDEXEC. IF sy-subrc gt. 0. EXIT. ENDIF. * Special treatment of
upper limit (highvalue) in Oracle IF l_s_part_info-high_value EQ
MAXVALUE. l_s_part_info-high_value = rsdu_c_max_value.
ENDIF. INSERT l_s_part_info INTO TABLE e_ts_part_info.
ENDDO. EXEC SQL. close csr ENDEXEC. ENDFORM. "
```
