

SQLServer2008新增TSQL简写语法计算机等级考试 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/644/2021_2022_SQLServer2_c98_644297.htm

1.定义变量时可以直接赋值 DECLARE @Id int = 5
2.Insert 语句可以一次插入多行数据 INSERT INTO StateList VALUES(@Id, WA), (@Id 1, FL), (@Id 2, NY)
3.支持 =操作符 SET StateId = 1 完整示例如下：

```
view plaincopy to clipboardprint?CREATE TABLE StateList(StateId int, StateName char(2)) GO -- Declare variable and assign a value in a single statement DECLARE @Id int = 5 -- Insert multiple rows in a single statement with IDs 5, 6, and 7 INSERT INTO StateList VALUES(@Id, WA), (@Id 1, FL), (@Id 2, NY) -- Use compound assignment operator to increment ID values to 6, 7, and 8 UPDATE StateList SET StateId = 1 -- View the results SELECT * FROM StateList CREATE TABLE StateList(StateId int, StateName char(2)) GO -- Declare variable and assign a value in a single statement DECLARE @Id int = 5 -- Insert multiple rows in a single statement with IDs 5, 6, and 7 INSERT INTO StateList VALUES(@Id, WA), (@Id 1, FL), (@Id 2, NY) -- Use compound assignment operator to increment ID values to 6, 7, and 8 UPDATE StateList SET StateId = 1 -- View the results SELECT * FROM StateList 结果集为： StateId StateName ----- 6 WA 7 FL 8 NY (3 row(s) affected)
```
