在Fedora8系统上安装一个虚拟机，上面跑个Windows Server 2003，好不容易找了个linux版本的vmware之后，安装好后，每次启动虚拟机都会报 Unable to change virtual machine power state: Internal error. 这样一个错误。一开始以为是vmware的设置有问题，后来在网上终于找到答案：Ran into this while running Vmware Workstation under Ubuntu Jaunty. I got an error while shutting down the machine through an NX session. This is a result of a zombie ' vmware-vmx ' process running. All you need to do is kill the process. This command sends ' signal 9 to the process. When sent to a program, SIGKILL causes it to terminate immediately. In contrast to SIGTERM and SIGINT, this signal cannot be caught or ignored. For more information: more sigkill info. killall -s9 vmware-vmxAfter that, I was able to start up the virtual machine without issue. (from:
