view plain #include int chdir (const char* pathname) ; int fchdir (int filedes) ; 这两个函数分别用文件名和文件描述符来制定新的工作目录。先查看GNU C手册。

int chdir (const char *filename) [Function] This function is used to set the process ' s working directory to filename. The normal , successful return value from chdir is 0. A value of -1 is returned to indicate an error. The errno error conditions defined for this function are the usual file name syntax errors (see Section 11.2.3 [File Name Errors] , page 224) , plus ENOTDIR if the file filename is not a directory.

int fchdir (int filedes) [Function] This function is used to set the process ' s working directory to directory associated with the file descriptor filedes. The normal , successful return value from fchdir is 0. A value of -1 is returned to indicate an error. The following errno error conditions are defined for this function : EACCES Read permission is denied for the directory named by dirname. EBADF The filedes argument is not a valid file descriptor. ENOTDIR The file descriptor filedes is not associated with a directory. EINTR The function call was interrupt by a signal.

实例； view plain #include"apue.h" int main (void) { if (chdir ("/dev/is/wangchenglin") 100Test 下载
