It also involves the dynamics of space interaction. If one person gets too close, the other person will back up. If the first person 47 the others space again, the other will back up again. The person who finds himself or herself backing up is trying to increase the distance of the 48 zone. The person closing in is trying to decrease the distance. Most likely 49 the one nor the other is fully aware of what is going on. In the 1960s, American anthropologist Edward T. Hall was a pioneer in study of human 50 use of space. His field of study became known as proxemics (空间关系学). Hall said that personal space for Americans can be defined as having four 51 zones: the 52 zone within 18 inches of your body for whispering and embracing. personal zone of 18 inches to four feet, for talking with close friends. social zone of four to 10 feet, for talking with 53 . and the social zone of 10 to 25 feet, for talking to strangers or to a group. Historians say that our 54 of personal space began with the Industrial Revolution in the 18th century. In cities such as London and New York, people of different social and economic classes were suddenly crammed together, so they 55 developed a commonly-understood rule of polite behavior and space to restrict the area around them. People exhibit nonverbal messages of 56 when their zones are violated. Invaded people might pull at their hair, become rigid, or even

become angry. As Hall noted in his work, a comfortable conversation needs to include the range of human personal space.
