1. What promotes American doctors to begin monitoring actively for possible infections? [A] There have been serious cases of swine flu in the United States. [B] U. S. health officials are increasing surveillance measures at doctors offices. [C] The epidemic happened in Mexico. [D] Experts remained on guard.

2. When someone has flu-like illness, why will a swab be taken in the nose and sent to the lab? [A] To find more infections than under normal circumstances. [B] To examine if it is influenza or swine flu. [C] To see if the illness is serious. [D] To stop the illness spread to other areas.

3. Why are people advised not to travel to Mexico? [A] Because it is the most serious area for the outbreak of swine flu. [B] Because a travel ban to the country has been ordered. [C] Because more than 100 cases of swine flu have been reported. [D] The Centers for Disease Control and Prevention forbids doing so.

4. What is one of the precautions that Japan has taken? [A] They make sure that they are asking flight passengers if they are sick. [B] They are taking a temperature of every passenger when they get off the airplane. [C] They are screening passengers on flights from Mexico. [D] They are forbidding people travelling to Mexico.

5. Which

statement is not true according to the passage? [A] U. S. health officials are increasing surveillance measures at doctors offices. [B] So far, the cases of swine flu in the United States are not very serious. [C] U. S. officials are determined to take more aggressive actions against swine flu. [D] Besser says, the number of infections will probably rise.
