2010年职称英语考试阅读理解模拟题与剖析（6）职称英语考试 PDF转换可能丢失图片或格式，建议阅读原文 https／／www．100test．com／kao＿ti2020／645／2021＿2022＿2010＿E5＿B9＿ B4＿E8＿81＿8C＿c91＿645728．htm Life in the U niverse Many scientists today are convinced that life existselsewhere in the universe－－life probably much likethat on our own planet．They reason in the following way．A sfar asastronomerscan determine，the entire universe isbuilt of the same matter．They have no reason to doubt that matter obeysthe same lawsin every part of the universe．
Therefore，it isreasonable to guessthat other stars，with their own planets，were born in the sameway asour own solar system．W hat we know of life on earth suggeststhat life will arisewherever the proper conditionsexist．Liferequiresthe right amount and kind of atmosphere．Thiseliminatesall those planetsin the universe that are not about the same size and weight asthe earth．A smaller planet would lose its atmosphere．a larger one would hold too much of it． Life also requiresasteady supply of heat and light．Thiseliminates double stars，or starsthat flare up suddenly．O nly single starsthat are steady sources of heat and light like our sun would qualify．Finally ，life could evolve only if the planet isjust the right distance from its sun．W ith a weaker sun than our own，the planet would have to be closer to it．W ith a stronger sun，it would have to befarther away． Thisprocessof elimination seemsto leave very few planetson which earthlike life might be found．H owever，even if lifecould exist on only one planet in a million，there are so many billionsof planets that thiswould still leave avast number on which life could exist． 1.

A stronomersbelieve that matter in different partsof the universeA） hasdifferent laws．B）hasone common law．百考试题－全国最大教育类网站（100test．com）C）sharesthe same lawsD）sharesno common law．2．The existence of life dependson all of the following factorsEXCEPT A）the right amount of atmosphere．B）our own solar system．C）steady heat and light．D）the right distance from the sun．3．Which of the following statementsisINCO RRECT？A）The planet must be asbig and heavy asthe earth．B）Proper conditions are esential to the existence of lifeC）Double starscan provide steady light and heat．D）The distance between a planet and itssun should be right．4．What kind of planet might NOT support life？A） Most of the planetsof the stars．B）Starssimilar to our sun．来源 ：考试大 C）Planetssimilar to the earth．D）Planetswith proper conditions 5．At the end of the passage the author suggeststhat A）it isimpossible for life to exist on planets B）earthlike life could only exist on afew planets．C）life could exist on only one planet in a million．D）life could exist on agreat number of planets KEY： CBCAD 相关推荐：2010年职称英语考试复习必经的三个阶段 2010年职称英语考试通关做题技巧全攻略 100Test下载频道开通，各类考试题目直接下载。详细请访问 www．100tes．com
