

使用JavaScript将复杂表格导出为Excel计算机等级考试 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/645/2021_2022__E4_BD_BF_E7_94_A8Java_c97_645275.htm

使用JavaScript将表格导出为Excel文件是一种比较常见的导出方法，但复杂表格的导出比较麻烦（比如报表的导出），为此我专门写了一段代码专门处理表格导出，与各位分享一下。

```
util.js:/** * Utilities for exporting a table as an excel file * @version 0.6 */ var idTmr = "".  
function Cleanup() { window.clearInterval(idTmr).  
CollectGarbage(). } function exportAsXls(table) { function  
ImpactedCell(row, col, offset) { this.row = row. this.col = col.  
this.offset = offset. } function CurrentCell(row, col, text, colspan,  
rowspan) { this.row = row. this.col = col. this.text = text. this.colspan  
= colspan. this.rowspan = rowspan. this.getRow = function  
getRow() { return this.row. } this.setRow = function setRow(row) {  
this.row = row. } this.getCol = function getCol() { return this.col. }  
this.setCol = function setCol(col) { this.col = col. } this.setColspan =  
function setColspan(colspan) { this.colspan = colspan. }  
this.getColspan = function getColspan() { return this.colspan. }  
this.setRowspan = function setRowspan(rowspan) { this.rowspan =  
rowspan. } this.getRowspan = function getRowspan() { return  
this.rowspan. } } function CellManager(originalRow, colOffset,  
impactedCells, currentCell) { this.originalRow = originalRow.  
this.colOffset = colOffset. this.impactedCells = impactedCells.  
this.currentCell = currentCell. this.setCurrentCell = function  
setCurrentCell(currentCell) { this.currentCell = currentCell. }
```

```
this.setOriginalRow = function setOriginalRow(originalRow) {  
this.originalRow = originalRow. } this.getCorrectedCol = function  
getCorrectedCol() { return this.currentCell.getCol() this.colOffset. }
```
