

printf输出特效计算机等级考试 PDF转换可能丢失图片或格式，建议阅读原文

https://www.100test.com/kao_ti2020/645/2021_2022_printf_E8_BE_93_E5_c97_645861.htm 给printf的输出加上些特效比如颜色，

可以让打印信息更鲜明，在debug的时候特别有用。颜色：

```
#define NONE "\033[m" #define RED "\033[0.32.31m" #define
```

```
LIGHT_RED "\033[1.31m" #define GREEN "\033[0.32.32m"
```

```
#define LIGHT_GREEN "\033[1.32m" #define BLUE
```

```
"\033[0.32.34m" #define LIGHT_BLUE "\033[1.34m" #define
```

```
DARY_GRAY "\033[1.30m" #define CYAN "\033[0.36m" #define
```

```
LIGHT_CYAN "\033[1.36m" #define PURPLE "\033[0.35m"
```

```
#define LIGHT_PURPLE "\033[1.35m" #define BROWN
```

```
"\033[0.33m" #define YELLOW "\033[1.33m" #define
```

```
LIGHT_GRAY "\033[0.37m" #define WHITE "\033[1.37m" 比如
```

```
： printf("\033[31m ####----- 100Test 下载频道开通，各类考试
