We like people who look like us, because they tend to have personalities similar to our own。新的研究显示，和某人在一起时间越长，我们和他的长相就越相似。 And, a new study suggests, the longer we are with someone, the more similarities in appearance grow。研究人员选取160对夫妻的单人照片，分别给11名的男性和11名女性看，让他们判断这些夫妻的年龄、魅力点和性格特征。但是在此之前，他们并不知道谁和谁是一对。 Researcher sat Wake Forest University School of Medicine in Winston-Salem, North Carolina, found that workers who enjoyed more work flexibility were also less likely to say health problems affected their performance at work。 22名参与者把他们认为相貌和性格相似的人摆在一起，而他们也恰恰就是真正的夫妻。而且，在一起生活时间越长的夫妻，相似性就越明显。 The test participants rated men and woman who were actual couples as looking alike and having similar personalities. Also, the longer the couples had been together, the greater the perceived similarities。 研究人员认为共同的经历造成了他们的相似性。 The researchers speculate that the sharing of experiences might affect

how couples look。英国利物浦研究人员托尼利特尔说：相貌和性格之间有关系这一想法听起来有点怪异，但却是有生物学依据的。The idea that there is a connection between appearance and personality might seem odd at first, but there could be biological reasons for a link, said study member Tony Little from the University of Liverpool in England。他说：“睾丸激素直接影响男性化的脸型形成，也影响人的行为。脸可以反映我们的情绪，长时间重复一个表情也会改变我们的脸。” "Testosterone is linked to masculine face shapes and it also affects behavior," Little said.

"Also, the face displays our emotions and over time emotional expressions may become written in the face." 相关推荐：#0000ff>托福阅读练习：每天吃同样的食物会累积毒素？#0000ff>托福阅读练习：世界上最最小国家正在出售#0000ff>托福趣味阅读：23个有意思的生活真相#0000ff>新托福阅读练习：了解我们的头发#0000ff>新托福阅读练习：The Next Finance Hiring Hot Spots#0000ff>新托福阅读练习：女性25岁后结婚更持久#0000ff>新托福阅读练习：行星撞地球将使人类成“吸血鬼”#0000ff>新托福考试阅读材料：2012世界末日将延后？100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
